

AI Website Chatbot with Memory

Professional Workflow Documentation

Overview

This workflow builds an AI-powered website chatbot using n8n, Google Sheets, and an OpenAI-compatible model. It stores conversation history and generates context-aware responses.

Features

- AI-powered chatbot
- Persistent conversation memory
- Google Sheets storage
- Context-aware responses
- Webhook API
- Website-ready architecture

Workflow Architecture

Receive Chat Request → Extract Request Data → Load Conversation Memory → Format Conversation History → AI Chat Assistant → Merge AI Response → Save User Message → Save Assistant Reply → Respond to Webhook

Workflow Nodes

1. Receive Chat Request
2. Extract Request Data
3. Load Conversation Memory
4. Format Conversation History
5. AI Chat Assistant
6. Merge AI Response
7. Save User Message
8. Prepare Final Response
9. Save Assistant Reply
10. Return Chat Response

Google Sheets Setup

Create a sheet named 'Messages' with columns: ConversationId, role, messages, timestamp.

AI Configuration

Supported providers: NVIDIA AI, OpenAI, OpenRouter, Azure OpenAI. Configure API Key, Base URL and Model.

Webhook Request

```
{ conversationId: 'abc123', message: 'Hello' }
```

Webhook Response

```
{ ConversationId: 'abc123', role: 'assistant', messages: 'Hello! How can I help you today?' }
```

Memory Flow

Each request loads previous conversation history, formats it, sends it to the AI model with the latest user message, stores both user and assistant messages, and returns the response.

Testing

1. Import workflow. 2. Configure credentials. 3. Test using Webhook Test URL. 4. Switch to Production URL. 5. Verify memory by asking follow-up questions with the same conversationId.

Customization

You can customize the AI model, prompts, conversation style, branding, and storage backend without changing the core workflow.

Troubleshooting

Verify AI credentials, Google credentials, sheet column names, webhook response mode, and use the same conversationId for multi-turn conversations.

Future Improvements

PostgreSQL/Supabase, PDF RAG, Website Knowledge Base, Streaming Responses, Human Handoff, Voice Support, Analytics Dashboard.
