

AI Meeting Notes & Action Items Generator

Version

Version: 1.0 (Phase-1)

Overview

The **AI Meeting Notes & Action Items Generator** is an n8n workflow that automatically converts meeting transcripts into structured meeting summaries, extracts key decisions and action items, stores the results in Google Sheets, and sends a professional meeting summary via email.

This workflow eliminates the need for manual meeting documentation while ensuring every action item is captured and shared.

Problem Statement

After every meeting, teams typically spend valuable time:

- Reading lengthy meeting transcripts
- Writing summaries
- Identifying action items
- Assigning owners
- Recording deadlines
- Sending follow-up emails

This repetitive process is time-consuming and often leads to missed tasks.

Solution

This workflow automates the complete post-meeting documentation process using AI.

The workflow:

- Receives a meeting transcript
- Uses AI to understand the discussion
- Generates a meeting summary
- Extracts key decisions
- Identifies action items
- Assigns owners
- Detects deadlines
- Stores every task in Google Sheets

- Sends a formatted meeting summary email
-

Workflow Architecture

Features

- AI Meeting Summary
- Key Decision Extraction
- Action Item Detection
- Owner Identification
- Deadline Detection
- Priority Assignment
- Google Sheets Integration

- Automated Email Summary
 - Webhook API Support
 - Reusable Workflow
-

Required Credentials

OpenAI

Used for meeting analysis.

Required:

- API Key
-

Google Sheets

Stores extracted tasks.

Required:

- Google OAuth Credential
-

Gmail

Sends the meeting summary.

Required:

- Gmail OAuth Credential
-

Workflow Nodes

1. Receive Meeting Request

Receives incoming meeting data using a webhook.

Method:

POST

Expected payload:

```
{
  "meetingTitle": "Sprint Planning",
  "meetingDate": "2026-06-25",
  "participants": [
    "John",
    "Alice",
    "Bob"
  ],
  "email": "manager@example.com",
  "transcript": "Meeting transcript..."
}
```

2. Prepare Meeting Data

Keeps only the required fields before sending data to the AI.

Fields:

- meetingTitle
- meetingDate
- participants
- email
- transcript

3. AI Meeting Analysis

The AI analyzes the transcript and extracts:

- Meeting Summary
- Key Decisions
- Action Items
- Owners
- Deadlines
- Priority

The AI returns structured JSON.

Example:

```
{
  "summary": "...",
  "decisions": [],
  "tasks": [
    {
      "task": "",
      "owner": ""
    }
  ]
}
```

```
    "deadline": "",
    "priority": ""
  }
]
```

4. Validate Structured Output

Ensures the AI response matches the expected schema before continuing.

5. Split Action Items

Splits every extracted task into an individual item.

Example:

Task 1

Task 2

Task 3

6. Format Task Records

Maps task fields into a clean structure suitable for database storage.

Output:

- Summary
 - Decision
 - Task
 - Owner
 - Deadline
 - Priority
-

7. Save Tasks to Google Sheets

Each action item is stored as an individual row.

Example:

Summary	Decision	Task	Owner	Deadline	Priority
---------	----------	------	-------	----------	----------

8. Combine Meeting Results

Rebuilds all tasks into a single object for email generation.

9. Generate Email Summary

Creates a professional meeting report.

Example:

Meeting Summary

Key Decisions

Action Items

Owner

Deadline

Priority

10. Merge Email Payload

Combines:

- Original webhook request
- Generated email content

This allows the email recipient to come directly from the webhook request instead of being hardcoded.

11. Send Meeting Summary

Sends the generated meeting report to the provided email address.

Google Sheets Structure

Recommended columns:

| Meeting Summary | Decision | Task | Owner | Deadline | Priority |

Sample Input

```
{
  "meetingTitle": "Sprint Planning",
  "meetingDate": "2026-06-25",
  "participants": [
    "John",
    "Alice",
    "Bob"
  ],
  "email": "manager@example.com",
  "transcript": "John will complete the login API by Friday. Alice will design the dashboard by Monday. Bob will test the deployment before release. We decided to use PostgreSQL instead of MySQL."
}
```

Sample AI Output

```
{
  "summary": "Sprint Planning meeting covered upcoming work items.",
  "decisions": [
    "Use PostgreSQL instead of MySQL"
  ],
  "tasks": [
    {
      "task": "Complete the login API",
      "owner": "John",
      "deadline": "Friday",
      "priority": "Medium"
    },
    {
      "task": "Design the dashboard",
      "owner": "Alice",
      "deadline": "Monday",
      "priority": "Medium"
    },
    {
      "task": "Test the deployment before release",
      "owner": "Bob",
      "deadline": "Before Release",
      "priority": "Medium"
    }
  ]
}
```

Email Output

Subject

Meeting Summary & Action Items

Body

Meeting Summary

Sprint Planning meeting covered upcoming work items.

Key Decision

- Use PostgreSQL instead of MySQL

Action Items

1. John

Task:

Complete the login API

Deadline:

Friday

Priority:

Medium

2. Alice

Task:

Design the dashboard

Deadline:

Monday

Priority:

Medium

3. Bob

Task:

Test the deployment before release

Deadline:
Before Release

Priority:
Medium

API Response

Example success response:

```
{
  "status": "success",
  "message": "Meeting processed successfully.",
  "tasksCreated": 3,
  "emailSent": true
}
```

Workflow Benefits

- Eliminates manual meeting documentation
- Reduces administrative work
- Improves task tracking
- Provides consistent meeting summaries
- Creates structured records
- Easy integration with existing systems
- Reusable via Webhook API

Use Cases

- Sprint Planning
 - Daily Standups
 - Client Meetings
 - Sales Calls
 - HR Interviews
 - Team Meetings
 - Project Kickoffs
 - Internal Discussions
-

Future Enhancements (Phase-2)

Potential improvements include:

- Automatic meeting transcription
 - Calendar integration
 - Slack notifications
 - Microsoft Teams integration
 - Jira task creation
 - ClickUp integration
 - Notion integration
 - AI confidence scoring
 - Follow-up reminders
 - Multi-language support
 - Meeting sentiment analysis
 - Duplicate task detection
-

Technology Stack

- n8n
 - OpenAI
 - Google Sheets
 - Gmail
 - Webhooks
 - JSON API
-

Conclusion

The AI Meeting Notes & Action Items Generator is a practical business automation workflow that transforms meeting transcripts into actionable outputs with minimal manual effort.

It demonstrates AI-powered information extraction, workflow orchestration, structured data processing, cloud integrations, and automated communication, making it suitable for teams, agencies, startups, and enterprises looking to streamline post-meeting workflows.
