

AI Bug Report Auto Ticket System

Version: 1.0.0
Release: Phase-1

Overview

This workflow automates bug reporting using n8n and AI. It receives bug reports via a webhook, analyzes them with AI, classifies severity and priority, generates a structured engineering ticket, stores it in Google Sheets, and sends a confirmation email.

Workflow Blueprint

```
graph TD; User --> Webhook; Webhook --> PrepareBugReport[Prepare Bug Report]; PrepareBugReport --> AIBugAnalysis[AI Bug Analysis Agent]; AIBugAnalysis --> ParseAIResponse[Parse AI Response]; ParseAIResponse --> MergeBugData[Merge Bug Data]; MergeBugData --> CreateMasterTicket[Create Master Ticket]; CreateMasterTicket --> GoogleSheets[Google Sheets]; GoogleSheets --> GmailConfirmation[Gmail Confirmation];
```

Prerequisites

- n8n
- Google Account
- Google Sheets OAuth
- Gmail OAuth
- AI Chat Model

Webhook Input

reporter_name
reporter_email
application
environment
browser
device
page_url
bug_title
bug_description
steps_to_reproduce
expected_result
actual_result
attachment

AI Responsibilities

- Analyze the bug
- Categorize the issue
- Determine severity
- Determine priority
- Generate technical summary
- Estimate business impact
- Suggest possible root cause
- Return valid JSON

Master Ticket

ticket_id
status
report_status
ticket_type
created_at
updated_at
assigned_to
source
resolution
version

Google Sheets

Append one row for every ticket with all bug details, AI analysis, and metadata.

Confirmation Email

Send a confirmation email to the reporter after the ticket is successfully stored.

Phase-2 Ideas

Jira Integration
GitHub Issues
Slack/Discord Notifications
Duplicate Detection
Screenshot Analysis
Analytics Dashboard
SLA Tracking
