

AI Receptionist Automation Blueprint

Production-Ready AI Receptionist built with n8n + AI

Overview

AI Receptionist is an intelligent customer support workflow that classifies customer messages into four intents: FAQ, Appointment, Lead Capture, and Human Escalation. Each branch automates the required business process and responds to the customer in real time.

Key Features

- AI Intent Classification
- FAQ Assistant
- Appointment Booking
- Google Calendar Integration
- Lead Capture
- Google Sheets CRM
- Gmail Notifications
- Human Escalation
- Real-Time Webhook Responses

Workflow Architecture

Webhook → Edit Fields → AI Intent Agent → Parse JSON → Switch → FAQ | Appointment | Lead | Human Escalation

FAQ Branch

Answers customer questions instantly using business knowledge and AI.

Appointment Branch

Validates appointments, checks Google Calendar availability, books events, logs bookings, sends confirmation emails, and returns a webhook response.

Lead Capture Branch

Validates lead details, stores qualified leads in Google Sheets, notifies the team via Gmail, and returns a webhook response.

Human Escalation Branch

Detects requests requiring human support, prepares escalation data, stores it in Google Sheets, emails the support team, and acknowledges the customer.

Google Sheets

Leads: Timestamp, Name, Email, Phone, Service, Status.

Human Escalations: Timestamp, Customer Name, Email, Phone, Reason, Customer Message, Status.
